

## Free Telecoms Health Check

As everyone needs to save some money at the moment, we are asking you to check on your most important business tools to make sure you are currently getting value for your money.

Your connectivity to the outside world is important. Broadband, VoIP, SIM only & Mobile Phones and Leased Lines – Could your business exist without these things?

### We'll help you answer the questions needed:

- When was the last time you had a professional audit of your telecoms, mobiles and connectivity? If not in the last 18 months you won't be taking advantage of the latest technologies that are available.
- Are you on the best mobile tariffs for your usages?
- Are you paying a maintenance agreement on a legacy telecoms system that needs to be upgraded to VoIP before the digital switch off and how you can avoid the rush before BT switches off traditional telecoms lines
- Are you getting free calls?
- Is the equipment you are using fit for purpose?
- Do you know why you are paying for things on your bill? Lots of companies have legacy products on their bills that haven't been cancelled when no longer required.
- Does your incumbent supplier look after you the way you had hoped they would or are you going around in circles with them?
- Are you just paying too much for what you have?

With our free health check we can review what your business is currently using and give you an analysis of your existing services. We will then tell you where you could save money OR we will happily tell you **CONGRATULATIONS** if you have got the best deal in the market for your requirements right now.

By understanding your business, how you are growing, and where you want to be - we can help your services adapt as your needs change.
